EFFECTIVE FROM JUNE 2013

(FOR PRIVATE CIRCULATION ONLY)

KOYO

Koyo

BALL & ROLLER BEARINGS

RECOMMENDED RETAIL PRICE LIST JUNE 2013.

- This price list is for private circulation only and should be treated as confidential.
- This price list is effective from 1st June 2013. and any RRP prior to this is no longer valid.
- The price list is for KOYO Bearings manufactured in Japan.
- This price list is in Indian Rupees inclusive of present custom duties and present exchange rate. The sales Tax and other Government levies shall be extra.
- The prices of bearings with "C3 Clearance" and Taper Bore (K) are same as that of standard bearings.
- The prices of angular contact ball bearing will remain same irrespective of contact angle whether it is A (omitted) =30° , B=40° or C=15°
- The prices for matched pair of angular contact ball bearing will remain same in any arrangement such as back to back (DB), face to face (DF) or in tandem (DT) arrangement.
- This price list covers the most common sizes. There are many other bearings that Koyo manufactures but could not be included in this list. For prices of such non listed items , please contact us or our Authorized Distributors/Importers/Dealers.
- Some of the items in the price list are subject to minimum order quantity for taking into production.
- This price list is subject to change without notice.

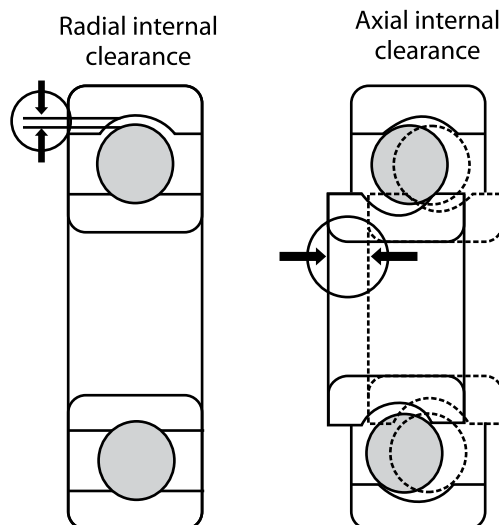

KOYO Bearings India Pvt.Ltd.

KOYO COMMON SUFFIXES & PREFIXES

SUFFIXES	SUFFIXES	PREFIXES	CAGES
30° contact angle for angular contact bearing ,where not specified e.g.7202	R Spherical roller bearings with asymmetrical roller design with separate finger type machined cage. e.g.23040R	ALS Angular contact ball bearing inch series, as per British Standard e.g.ALS10	Standard steel cage where not specified
B 40° contact angle for angular contact bearing e.g.7202 B	RH Spherical roller bearings with symmetrical roller design with pressed steel cage. e.g.23020RH	AMS Angular contact ball bearing inch series, as per British Standard e.g.AMS13	FP Pin type machined cage of carbon steel
C 15° contact angle for angular contact bearing e.g.7205 C	RHR Spherical roller bearings with symmetrical bigger roller with pressed steel cage. e.g.22218RHR	CRL Cylindrical roller bearing inch series, as per British Standard e.g.CRL14	FW Separable finger type machined cage of high tension brass
D Steep contact angle (24°~32°) for metric taper roller bearing. e.g.30310DJR	RS With one seal contact type for ball bearings. e.g.6202 RS	CRM Cylindrical roller bearing inch series, as per British Standard e.g.CRM40	FY Machine cage of High tension brass
G Angular contact bearing with flush ground inner and outer ring side faces. e.g.7304BG. G type bearings can be freely used in any combination	2RS With two seal contact type for ball bearings e.g.6202 2RS	H Heavy duty inch series tapered roller bearing e.g. H715345/11	MG Moulded cage of glass fiber reinforced polyamide
J Metric taper roller bearing conforming to ISO R355.	W33 Oil groove with three equi-spaced oil holes on outer ring of a spherical roller bearings. e.g. 22218RHRW33	HM Heavy medium duty inch series tapered roller bearing e.g. HM803146/10	YP Pressed type phosphor bronze sheet
K Bearing with tapered bore with taper of 1:12 e.g. 1210K	Z With one shield for ball bearing e.g. 6302 Z	LM Light medium duty inch series tapered roller bearing e.g. LM245833/10	FG Moulded cage of glass fiber reinforced polyamide
K30 Tapered bore of spherical roller bearings of series 240 & 241 has a taper of 1:30 e.g. 24056RK30W33	ZZ With two shield for ball bearing e.g. 6302 ZZ	RLS Deep groove ball bearing inch series, as per British Standard e.g. RLS16	
N Bearing with snap ring groove e.g. 6205 N	ZZX With two shield separable type for ball bearing e.g. 6220 ZZX	RMS Deep groove ball bearing inch series, as per British Standard e.g.RMS14	
NR Bearing with snap ring & snap ring groove e.g. 6205 NR			

What is internal clearance?

- Bearing internal clearance is defined as the total distance either inner or outer ring can be moved.
- The Radial Clearance.
- The Axial Clearance.

Generally, internal clearances are designated from C1 (the tightest) through to C5 (the loosest). The 'normal' clearance is a range sitting between C2 and C3.

With a higher clearance there is more tolerance of thermal effects. When noise and vibration must be restricted, lower clearances are necessary. The specific application and operating conditions determine the appropriate internal clearance. Dryers of paper making machines and table rollers of rolling mills that operate under hot conditions usually need C3 or C4 clearances. The severe vibration in shaker screens normally means that C3 and C4 clearances are required. In case of railway rolling stock traction motors and tractor final reduction gears C4 clearance is required. When the shaft deflection is large as in automobile rear wheel, C5 clearance may be selected. When noise /vibration during rotation is to be lowered as in case of micro - motors, C1, C2 or CM clearance can be used.

CM clearance is specifically offered for electric motors by Koyo. This class includes a tighter noise specification. As for Koyo single row ball bearings, the CM clearance falls within the range of the 'normal clearance'. CM clearance is specified by some motor manufactures where closer radial internal clearance helps reduce noise.

Example :

Bore Diameter	Over (mm) 10	Incl (mm) 18
Clearance	Min (μ)	Max (μ)
C2	0	9
CM	4	11
Normal	3	18
C3	11	25
C4	18	33
C5	25	45

From the above table, one can see that with a bore diameter of 18 mm, the 'normal clearance' is between 3 μ and 18 μ whereas for CM of similar bore diameter is between 4 μ and 11 μ. That means closer tolerance.
